

Given some food chain restaurant data set (FB_Data), perform the following tasks and develop visualizations in tableau (Note: There are multiple ways to plot a given question. Plot as many as you can)

1. Observe if all the attributes are appropriately assigned to dimensions and measures. If not, reassign the attributes.
2. Create a hierarchy with Location name, revenue centre name and menu item name and observe how each of these are performing. While working with the menu items visualization, consider only top 10 items based on revenue
3. Create a parameter for check total and see how many items are above the threshold you have set.
4. Identify which revenue centers are performing better
5. Identify which months in the year have highest sales
6. Plot the sales of each employee over time
7. Provide the employee IDs for each location
8. Give a box plot for Revenue for each location
9. Create a Dashboard with the plots of your choice to show any insights
10. Create a Story
